PROFESSIONAL SUMMARY

AI/ML-focused Computer Science student with hands-on experience building machine learning systems and secure full-stack web applications. Developed projects including spam detection models, house price prediction systems, and AI-driven document generation tools. Skilled in Python, scikit-learn, Pandas, NumPy, and web technologies with a strong interest in building intelligent and scalable software solutions.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering

Shri Sitarambhai Naranjibhai Patel Institute of Technology – Gujarat Technological University (GTU), Surat

2022 – Present | **CGPA: 6.86**

TECHNICAL SKILLS

Programming Languages: Python, C, Java (Basic), JavaScript, PHP

Web Technologies: HTML5, CSS3, JavaScript, PHP, REST APIs

Machine Learning & AI: scikit-learn, LangGraph, Feature Engineering, Model Evaluation

Web & Tools: REST APIs, MySQL, Streamlit, LangGraph, GitHub

INTERNSHIPS

AI/ML Intern | Bhaskaracharya National Institute for Space Applications and Geo-Informatics (BISAG-N)

January 2026 – Present

- Developed an **AI-powered Formal Document Generator** using **Django** to automate creation of standardized administrative and government documents with strict template compliance.
- Designed a **JSON-driven template architecture** to enforce consistent document structure, headers, and formatting across multiple document types.

- Integrated **LLM-based content generation (Gemini API)** to generate contextual document bodies from structured user prompts.
- Implemented **document rendering and export pipeline** supporting real-time preview, **PDF generation (WeasyPrint)**, and **DOCX export (python-docx)**.

AI/ML Virtual Intern | QSkill (SR India)

Jan 2026 -Feb 2026

- Developed **machine learning models for real-world prediction and classification tasks** using Python and scikit-learn as part of an AI/ML internship program.
- Built a **Spam Email Detection system** using Natural Language Processing techniques including **TF-IDF vectorization and classification models** for automated spam filtering.
- Implemented a **House Price Prediction model** using regression algorithms with structured dataset preprocessing and feature engineering.
- Performed **data preprocessing, model training, and performance evaluation** using metrics such as **R^2 score and RMSE**.

AI Intern | IBM SkillsBuild

July 2025 (15 Days)

- Developed solution prototype addressing UN Sustainable Development Goal 1 (No Poverty) using AI-assisted tools
- Designed and deployed functional web platform showcasing "Empower Cycle" microenterprise solution for rural mobility
- Applied data-driven analysis concepts for customer retention modeling and fraud reduction strategies
- Collaborated with cross-functional team to integrate AI recommendations into user-facing interface

---

PROJECTS

Formal Document Generator – Agentic AI System

- Built a **Django-based AI system** that generates structured formal letters using **LLM-assisted prompt engineering**.
- Designed a **prompt templating workflow** to convert user inputs into structured prompts for controlled AI output generation.
- Implemented **dynamic template rendering with PDF and DOCX export**, enabling standardized document generation.

Teach & Tech – Secure Learning Management System

- Developed a **secure Learning Management System (LMS)** with **OTP-based passwordless authentication** and role-based access control.
- Implemented **secure file upload and download mechanisms** with MIME validation and protected routing.
- Applied **web security practices** including **CSRF protection, input validation, and brute-force login protection**.

Spam Mail Detector – NLP-Based Classification System

- Built a **machine learning classification model** to detect spam messages from text datasets.
- Applied **Natural Language Processing techniques** including **TF-IDF vectorization** for text feature extraction.
- Trained and evaluated classification models using **scikit-learn** for accurate spam classification.

House Price Prediction ML – Regression Model Deployment

- Developed a **machine learning regression model** to predict housing prices using **Python and scikit-learn**.
- Performed **data preprocessing and feature engineering** to improve model training and prediction accuracy.
- Evaluated model performance using **R^2 score and RMSE metrics**.

Weather Application – Real-Time API Integration

- Developed real-time weather application using JavaScript and OpenWeather API with dynamic data handling
- Designed clean, minimalistic user interface with intuitive search functionality for location-based forecasts
- Implemented error handling and API rate limiting to ensure application stability and user experience
